bulltrading.pro

1. 开始阅读 / Start Reading

Pulse 在独立副图中显示动量线、参照线和信息卡，用于观察两条线当前的相对位置。通过下方 TradingView 链接打开脚本页面，将指标添加到图表后，可先保留默认设置开始观察。

Pulse displays a momentum line, reference line, and information card in a separate pane. It describes the lines' current relative positions. Open the script page using the TradingView link below, add the indicator to your chart, and start with the default display settings.

TradingView : [打开 BullTrading Pulse V1.0](#) / [Open BullTrading Pulse V1.0](#)

卡片读数 Card reading	含义 Meaning
偏多 Bullish bias	动量线在参照线上方 Momentum line above reference
偏空 Bearish bias	动量线在参照线下方 Momentum line below reference
重合 Equal	两条线数值相等 Equal line values
-	数值尚不可用 Value unavailable

这些文字描述当前关系，不表示本根刚发生交叉。本版不提供买卖箭头、交易提醒或自动执行。

These labels describe the current relationship, not necessarily a new crossover on this bar. This edition has no buy/sell arrows, trading alerts, or automated execution.

按三个步骤观察 / Observe in Three Steps

1. 先看两线相对位置，再看这种关系持续还是反复切换。

2. 对照价格走势，记录动量读数与价格变化是否同步；不把一次状态变化或交叉当成独立交易结论。

3. 再看数值所在参考区和卡片时点，区分正在形成与已经完成的读数。

1. Read the lines' relative positions, then observe whether that relationship persists or alternates.

2. Compare with price and note whether momentum readings move together with it. A state change or crossover alone does not establish a trading conclusion.

3. Check the reference zone and card timing to distinguish developing from completed readings.

2. 调整显示 / Adjust the Display

先调整可读性，再比较不同图表。以下是已提供的常用显示设置。

Adjust readability first, then compare charts. The following display settings are available.

设置 Setting	默认 Default
界面语言 Interface language	中文；可切换英文 Chinese; English available
主题 Theme	自动；支持深浅主题 Auto; light and dark supported
动量线与参照线 Momentum and reference lines	均显示 Both shown
主题自适应线色 Theme-adaptive line colors	开 On
线宽 Line width	2
极值参考色带 Extreme reference bands	开；透明度 92 On; transparency 92
50 中轴 50 centerline	显示 Shown
信息卡 Information card	显示、精简、右上、小字号 Shown, compact, top-right, small

卡片可选精简或详细布局，分别显示 4 行与 6 行，也可选择四角位置。线色可自定义；默认使用主题自适应颜色。隐藏某条线不会停止其计算，卡片仍可显示两线关系。

The card offers compact and detailed layouts with 4 and 6 rows, plus four corner positions. Colors are customizable; theme-adaptive colors are enabled by default. Hiding a line does not stop its calculation, so the card can still describe the relationship.

0-20 与 80-100 色带只提供数值区域参考。同一区域不能自动解释为两条线具有相同方向，也不是价格必须反转的边界。50 中轴同样只是视觉参照。

The 0-20 and 80-100 bands are numerical reference zones. Sharing a zone does not automatically imply that both lines have the same direction, and the zones do not require a price reversal. The 50 centerline is also a visual reference.

3. 时点与常见问题 / Timing and Common Questions

盘中读数会变化。卡片的"已收盘"表示当前柱已经完成，不是冻结显示的开关。卡片只跟随图表最后一柱，不随十字光标移动到历史柱。阅读历史位置时，请看该位置的两条曲线。

Intrabar readings can change. "Closed" means that the current bar has completed; it is not a display-freeze switch. The card follows only the chart's last bar, not the historical bar under the crosshair. Read the plotted lines when examining history.

现象 Question	说明 Explanation
卡片与十字光标位置不同 Card differs from crosshair position	卡片显示最后一柱 The card shows the last bar
隐藏线后偏向仍显示 Bias remains after hiding a line	只隐藏绘图，计算继续 Only the plot is hidden; calculation continues
数字显示 - A value shows -	当前数值无效；不会补成 0 或 50 The value is unavailable; no 0 or 50 is substituted
偏向但价格下跌 Bullish reading while price falls	偏向描述双线关系，不预测后续价格 Bias describes the two lines, not future price

脚本使用当前图表周期，没有内置跨周期判断。不同周期可分别观察；实时行情、历史数据变化与数据源差异都应纳入比较。它是动量观察工具，不提供收益保证或笼统"不重绘"承诺。

The script uses the current chart timeframe, with no built-in multi-timeframe assessment. Observe other timeframes separately and account for live updates, historical data changes, and feed differences. Pulse is a momentum observation tool, without guaranteed returns or a blanket non-repainting claim.
